

WELCOME to the HINGHAM SOLAR OPEN HOUSE VIRTUAL TOUR 2020

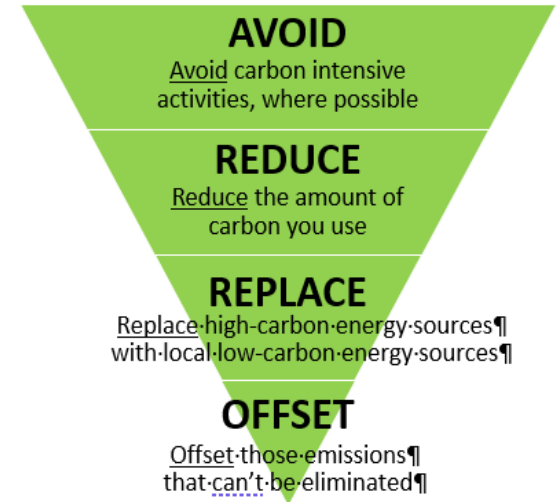

This year's tour is hosted by Hingham Net Zero, Hingham residents concerned about climate change and its impact on our seaside community and working to help our town reduce our carbon footprint. You will be able to visit "virtually" Hingham homes that have solar panel installations and other carbon reducing technologies in operation.

Have you wondered what is involved in having solar panels, heat pumps, or an electric vehicle? Click on the "virtual tours" below. Your Hingham neighbors will show you how they are reducing their carbon emissions and tell you their stories: why they adopted the technology, how it works for them, and any issues they suggest fellow Hinghamites consider if you too are interested in doing your part to reduce climate changing carbon emissions.

If you want to learn more about these carbon reducing approaches, check out the Hingham Net Zero website and the What You Can Do menu to view presentations on such technologies as solar panels, air-source heat pumps, and electric vehicles at <https://www.hinghamnetzero.org/>.

And if you have questions, let us know that you are interested in connecting with a Climate Coach, a fellow Hingham resident with experience in using these carbon reducing approaches. To arrange for a Climate Coach, contact us at hinghamnetzero@gmail.com

Welcome and we hope you enjoy the tours!

With thanks to Matt Burke of burkevisualproductions.com for helping with many of the virtual tours
